Experience

Intern

June 2026 - Present

eInfochips(An Arrow Company)

- Profiled and optimized complex SQL queries and data processing workflows, reducing data retrieval latency by 7%+ across production databases.
- Audited relational database architectures to improve data accuracy, normalization, and consistency across large-scale enterprise reporting pipelines.

Technical Lead

September 2025 - May 2026

VishwaShauryam, VIT Pune

- Led backend and database development for the official club platform, managing user data infrastructure to securely scale event registration pipelines for 8+ major events (300+ concurrent attendees each).
- Managed data-driven digital campaigns, monitoring web analytics to drive an increase in traffic (800+ monthly visitors) and a 35% boost in event conversions.

Technical Skills

Data Engineering & Cloud: Databricks, PowerBI, Spark SQL, PySpark, DeltaLake, ETL Pipelines, REST APIs, Git, GitHub.

Databases & Storage: SQL, MySQL, PostgreSQL, MongoDB, Data Normalization, Query Optimization.

Data Science & Analytics: Scikit-learn, Statistical Analysis, Feature Engineering, Isolation Forest.

Languages: Python, SQL, C++, Java, JavaScript.

BI & Visualization: Streamlit, Real-time Dashboards, Matplotlib / Seaborn.

Projects

Taxi Medallion Architecture | *Databricks, PySpark, Spark SQL, Delta Lake*

- * Built an end-to-end Lakehouse ETL pipeline on Databricks using the Medallion Architecture (Bronze–Silver–Gold) to ingest, clean, enrich, and analyze 9.4M+ NYC Yellow Taxi trip records across 11 modular notebooks using PySpark and Spark SQL.
- * Engineered a **Delta Lake** data platform with 7+ production-style operations (MERGE, UPDATE, DELETE, Time Travel, RESTORE, OPTIMIZE, ZORDER, VACUUM) and generated 5 analytics-ready Gold tables powering interactive business reporting.
- * Developed a Lakeview dashboard with 9 business KPIs and visualizations, including revenue trends, hourly demand, payment methods, vendor performance, and top pickup zones, supported by Spark SQL aggregations and data quality validation workflows.

OpenCredit | *FastAPI, PostgreSQL, scikit-learn*

- * Built a production-grade financial data platform with 50+ endpoints using FastAPI and PostgreSQL, managing relational data modeling and data consistency across a 4-tier Role-Based Access Control (RBAC) system.
- * Engineered a real-time analytics and anomaly detection pipeline using **Isolation Forest** to ingest transaction streams and perform complex feature engineering (velocity, geo-mismatch, and high-value threshold checks).
- * Implemented data integrity validations and audit ledgers using SHA-256 hash-chaining alongside full Alembic database migration support, maintaining 85% test coverage. * Achieved 85% test coverage across 141 passing tests with full Alembic migration support; deployed live at opencredit-api-ivon.onrender.com

MindTheGap | *C++, Flutter, Node.js, MongoDB, Google Maps API*

- * Designed a scalable data ingestion system utilizing Node.js and MongoDB to collect, parse, and process over 1,432 geo-tagged reports and image metadata over a 90-day window.
- * Developed an end-to-end real-time analytics dashboard to track urban civic issues, integrating the Google Maps API for spatial analysis and geo-fencing.
- * Designed a data classification algorithm to prioritize incoming issues, optimizing data routing pipelines and reducing average issue-resolution latency by 27.8%.

Education

Vishwakarma Institute of Technology, Pune (SPPU)

Pune, Maharashtra

B.Tech in Computer Science Engineering,

July 2023 – June 2027

Mount St. Patrick Academy (ISC Board)

Pune, Maharashtra

Physics, Chemistry, Mathematics with Computer Science

May 2023
